Automated External Defibrillator Follow-Up Data

Area Program Manager: ADCS (b) (6)
Location: FREEDOM HALL

Cause of Arrest	Presumed: Cardiac <u>Resp</u> Trauma Poisoning Other (Circle One)
Attempted resuscitation	<u>Yes</u> No (Circle One)
Number of shocks delivered by AED	<u>0</u>
Admitted to hospital	Yes No (Circle One) Location:
Patient transported to higher level of care	<u>Yes</u> No (Circle One) Facility: <u>LAKE FORREST</u>
Died in Emergency Department	Yes <u>No</u> (Circle One)
Number of days in hospital	<u>1</u>
Discharged alive	Yes <u>No</u> (Circle One)
Alive at one year	Yes <u>No</u> (Circle One)

Enclosure (2)

MANAGING DEFIBRILLATOR DATA

The LIFEPAK 1000 defibrillator provides an infrared method to transfer defibrillator data.

Overview of Data Storage

Every time you use the defibrillator, it digitally saves patient data that can be transferred to a PC. You can provide patient data to aid in case review for quality control, training, and research purposes. You should become familiar with local requirements for reporting a use of the LIFEPAK 1000 defibrillator and for providing use data. For assistance in retrieving data from the defibrillator, contact your local Physio-Control sales representative or authorized service personnel.

Data Stored by the LIFEPAK 1000 Defibrillator

Whenever you turn on the defibrillator and connect it to a patient, it automatically stores data about the patient. When this data is transferred to a data management system for review (for example, CODE-STAT™ software), three patient reports are available: Event Log, Continuous ECG, and CODE SUMMARY. Table 4-1 describes these reports.

Table 4-1 Patient Reports

Report Type	Description
Event Log	A chronological log of all events. An event is a condition noted by the defibrillator. Events are listed on page 4-3.
Continuous ECG	Forty minutes of the patient's ECG rhythm beginning when the patient is connected to the defibrillator and ending when the defibrillator is turned off.
CODE SUMMARY	Combines the Event Log and a sampling of continuous ECG rhythms associated with certain events, such as defibrillation.

The LIFEPAK 1000 defibrillator can store up to two patient records: one for the current patient and one for the previous patient. When you use the defibrillator, it is important to transfer the patient data as soon as possible after use. The Complete Record for the current patient includes the Continuous ECG and Event Log. If you treat a second patient, the first patient's Continuous ECG is reformatted into a CODE SUMMARY report. If you treat a third patient, all of the first patient's data is deleted and the second patient's Continuous ECG is reformatted into a CODE SUMMARY report.

Table 4-2 Patient Records

	Complete Record	Summary	Continuous ECG
Current Patient	X	X	X
Previous Patient	Ø	X	Ø

If you turn the defibrillator on and off without attaching electrodes to a patient, the defibrillator does not create a new patient record and the patient records in the defibrillator are not altered. The LIFEPAK 1000 defibrillator does not delete patient data after you transfer the data to a PC. The defibrillator deletes previous patient data only when it is connected to a new patient or a simulator.

Test and Service Data

The LIFEPAK 1000 defibrillator stores a test log consisting of the most recent auto-tests, power cycles, and battery replacements. The test log lists the test results and any errors detected. The test log data is available only to authorized service personnel or to responders who are using the appropriate LIFENET system product.

Event and Test Log

Table 4-3 and Table 4-4 list the types of events that may be annotated on event and test log reports.

Table 4-3 Events

Events	Events	Events
Power On	Shock X Abnormal	Motion
Connect Electrodes	No Shock Advised	Analysis Stopped*
Patient Connected	CPR Prompt	Low Battery
AED Mode	Stop CPR Prompt	ECG Mode
Initial Rhythm*	Check Patient*	Out of Event Memory
Analysis X*	Charge Removed	Out of Waveform Memory
Shock Advised	Manual Mode	Power Off
Charge Complete	Replace Battery	Recovery Time*
SHOCK X-XXXJ*	Charge Button Pressed	

*These events include ECG samples in the Summary Report.

Table 4-4 Test Log Report

Test Log
Self Test Power On
Self Test Pass/Fail
User Power On/Off
Battery Changed

Overview of Connections for Transmitting Reports

Patient, test, and service data can be transmitted from the LIFEPAK 1000 defibrillator to a PC-compatible computer equipped with CODE-STAT software, version 6.0 or later, a Physio-Control LIFENET system product.

The LIFEPAK 1000 defibrillator (see Figure 2-1) supports wireless, infrared communications for transmitting data from the defibrillator to your computer. To receive the transmission, your computer must have an operational IrDA port.

If your computer does not have an IrDA port, you can install an IrDA adapter to provide the needed interface. Physio-Control recommends installing an IrDA adapter on all computers to ensure successful communication connections and data transmissions.

IrDA adapters are available for serial or USB computer ports. Follow the installation and usage instructions provided with the adapter, ensuring that the adapter mount (receiving end) is positioned on a stable surface. Figure 4-1 provides guidelines to follow for positioning the defibrillator and the IrDA adapter before initiating a transmission.

FREEDOM HALL MONTHLY AED CHECK LIST

1. Complete this check off sheet the First Monday of each month
(If we are closed on Monday, it will be completed on the following workday). This sheet will be maintained for 1 year.

1. Ensure the following equipment is present:

- 1 LifePak 500/1000 AED unit
- 2 Pairs of pads
- 2 Disposable gloves
- 1 CPR reusable mouth barrier
- 1 Razor
- 1 anti-microbial wipe
- 1 trauma scissors
